📊 Blinkit Sales Analysis Dashboard

Power BI Project Report

1. Project Overview

Blinkit is a quick-commerce platform that delivers groceries and daily essentials.
The goal of this project is to analyze Blinkit sales data and create an **interactive Power BI dashboard** that helps understand:

- Sales performance
- Product demand
- Outlet performance
- Customer satisfaction

The dashboard provides **visual insights and KPIs** that help businesses make data-driven decisions.

---

2. Objectives of the Project

The main objectives of this project are:

1. Analyze overall sales performance.
2. Identify top-selling products.
3. Evaluate outlet performance by size and location.
4. Analyze category-wise product demand.
5. Understand customer rating trends.
6. Build an interactive dashboard for business insights.

---

3. Dataset Description

The dataset used for this project contains Blinkit sales data.

Dataset Columns

Column Name	Description
Order_ID	Unique ID for each order
Order_Date	Date when the order was placed
Product_Name	Name of the product sold
Category	Product category

Column Name	Description
Sales	Revenue generated
Quantity	Number of items sold
Outlet_Type	Type of outlet/store
Outlet_Location	Tier location of outlet
Outlet_Size	Size of outlet
Customer_Rating	Customer feedback rating

---

4. Data Cleaning & Preparation

Data cleaning was performed in **Power Query Editor**.

Steps Performed

1. **Removed Null Values**
2. **Checked Data Types**
3. **Removed Duplicate Records**
4. **Formatted Date Columns**
5. **Trimmed Text Values**

Data Type Adjustments

Column	Data Type
Order_Date	Date
Sales	Decimal
Quantity	Whole Number
Customer_Rating	Decimal

These steps ensured **clean and reliable data for analysis**.

---

5. Data Modeling

Since the dataset contains all necessary fields in a single table, **a simple data model was used**.

Table Used:

Blinkit_Sales

Measures were created using **DAX** to calculate KPIs.

---

6. Key Performance Indicators (KPIs)

KPIs provide quick insights into business performance.

Total Sales

Total Sales = SUM(Sheet1[Sales])

Insight

Total revenue generated from all sales.

Average Sales

Avg Sales = AVERAGE(Sheet1[Sales])

Insight

Shows average revenue generated per transaction.

Total Quantity Sold

Total Quantity = SUM(Sheet1[Quantity])

Insight

Total number of items sold.

Average Customer Rating

Avg Rating = AVERAGE(Sheet1[Customer_Rating])

Insight

Measures customer satisfaction.

---

7. Dashboard Pages

The dashboard is divided into **three analytical pages**.

📈 Page 1 — Sales Overview

This page gives a **high-level summary of the business performance**.

Visualizations

1️⃣ KPI Cards

Displays:

- Total Sales
- Average Sales

- Total Quantity
- Average Rating

Insight

Provides quick understanding of business performance.

2️⃣ Sales Trend (Line Chart)

Fields:

X Axis → Order_Date
Y Axis → Total Sales

Insight

Shows sales growth over time.

Example insight:

- Sales increased steadily in recent months.
- Seasonal trends can be identified.

3️⃣ Sales by Category (Donut Chart)

Fields:

Legend → Category
Values → Total Sales

Insight

Shows which product categories generate the most revenue.

Example insight:

- Snacks and Beverages contribute the highest sales.

4️⃣ Sales by Outlet Location (Bar Chart)

Fields:

Axis → Outlet_Location
Values → Total Sales

Insight

Compares sales performance across locations.

Example insight:

- Tier 3 cities generate higher sales due to larger customer base.

5️⃣ Sales by Outlet Size (Donut Chart)

Fields:

Legend → Outlet_Size
Values → Total Sales

Insight

Identifies which outlet sizes generate the most revenue.

Example insight:

- Medium-sized outlets contribute the highest sales.

📊 Page 2 — Product Analysis

This page focuses on **product performance and demand**.

1️⃣ Top Selling Products (Bar Chart)

Fields:

Axis → Product_Name
Values → Total Sales

Insight

Identifies top performing products.

Example insight:

- Products like milk and detergent generate the highest revenue.

2️⃣ Quantity Sold by Category (Column Chart)

Fields:

Axis → Category
Values → Quantity

Insight

Shows product demand across categories.

Example insight:

- Snacks and staples have high purchase frequency.

3️⃣ Customer Rating by Category (Bar Chart)

Fields:

Axis → Category
Values → Avg Rating

Insight

Shows customer satisfaction by category.

Example insight:

- Dairy products receive higher ratings.

4️⃣ Product Performance Table

Columns:

Product_Name
Category
Sales
Quantity
Customer_Rating

Insight

Provides detailed product-level analysis.

📊 Page 3 — Outlet Performance

This page analyzes **store and location performance**.

1️⃣ Sales by Outlet Type (Bar Chart)

Fields:

Axis → Outlet_Type
Values → Total Sales

Insight

Compares performance of grocery stores and supermarkets.

Example insight:

- Supermarkets generate more revenue.

2️⃣ Quantity Sold by Outlet Type (Column Chart)

Fields:

Axis → Outlet_Type
Values → Quantity

Insight

Shows which store type sells more items.

3️⃣ Average Rating by Outlet Size (Bar Chart)

Fields:

Axis → Outlet_Size
Values → Avg Rating

Insight

Shows customer satisfaction by outlet size.

4️⃣ Sales by Outlet Location and Type (Stacked Bar Chart)

Fields:

Axis → Outlet_Location
Values → Total Sales
Legend → Outlet_Type

Insight

Shows location-wise store performance.

---

8. Filters (Slicers)

Slicers allow users to dynamically filter data.

Slicers Used

- Category
- Outlet Type
- Outlet Size
- Outlet Location
- Order Date

These slicers help users analyze the data interactively.

---

9. Key Insights from Dashboard

1. Certain product categories contribute most of the revenue.
2. Medium sized outlets generate higher sales.
3. Tier 3 locations show strong sales performance.
4. Some products have significantly higher demand.
5. Customer ratings help identify product quality perception.

---

10. Tools Used

- **Power BI Desktop**
- Power Query
- DAX
- Data Visualization

---

11. Conclusion

This dashboard helps analyze Blinkit sales performance across different business dimensions including products, outlets, and customer feedback.

The dashboard enables businesses to:

- Monitor sales performance
- Identify high demand products
- Evaluate outlet efficiency
- Improve customer satisfaction

The interactive dashboard provides **actionable insights for better business decision making**.

Key Insights

- Certain product categories generate the highest sales.
- Supermarkets perform better than grocery stores.
- Medium-sized outlets contribute the most revenue.
- Customer ratings help evaluate product satisfaction.
